

## **CIRCULITE PROVIDES CLINICAL UPDATE ON SYNERGY PROGRAM AT 19TH ANNUAL PIPER JAFFRAY HEALTH CARE CONFERENCE**

**HACKENSACK, N.J. and AACHEN, Germany (November 20, 2007)** – CircuLite™, Inc. today announced that Paul Southworth, President and Chief Executive Officer, will provide a corporate overview and clinical update on the Company's Synergy™ Pocket Circulatory Assist Device program at the upcoming Piper Jaffray Health Care Conference at the Pierre Hotel in New York, NY. The presentation will be on Wednesday, November 28 at 1:50 PM EST in the Regency A room.

Synergy is a miniature implantable blood pump, the size of a AA battery, that can be implanted superficially. The device is designed to supplement a failing heart by providing long-term, partial circulatory support in patients with chronic heart failure. Since launching the clinical development program in June 2007, three short-term support patients have received the Synergy device. One patient has successfully been transplanted and two patients are currently supported by the Synergy device. Initial data from these three patients and a device overview were presented at the Transcatheter Cardiovascular Therapeutics conference in October 2007. CircuLite is preparing to begin enrollment of patients for the long-term use of the device.

### **About CircuLite™**

CircuLite is developing a miniature blood pump, designed to be placed superficially like a pacemaker, for the long-term treatment of chronic heart failure. The Synergy Pocket Circulatory Assist device is designed to rest a failing heart by supplementing its natural function. By providing long-term circulatory assist on a minimally invasive platform, CircuLite's Synergy has the potential to transform the management of chronic heart failure and improve the quality of life for millions of patients and their families. For more information on CircuLite and the Synergy Pocket Circulatory Assist device, visit our website at [www.CircuLite.net](http://www.CircuLite.net).
