

LEARN ABOUT THE FIRST MICRO-PUMP DESIGNED FOR LONG-TERM HEART FAILURE SUPPORT AT ISHLT 2008

-CircuLite's Synergy™ Pocket Circulatory Assist Device to be highlighted at ISHLT booth 107-

CircuLite®, Inc. will be participating in the 2008 International Society for Heart and Lung Transplantation (ISHLT) conference, held April 9-12 in Boston, with a booth display featuring its Synergy™ Pocket Circulatory Assist Device. Synergy is the first micro-pump designed for long-term, partial circulatory support to improve the quality of life for a broad range of chronic heart failure patients.

Come visit CircuLite at booth 107

- Receive the latest updates from the ongoing long-term CE Mark trial for Synergy
- Meet members from CircuLite's management team
- Speak directly with investigators on Synergy's clinical trials including:
 - **Bart Meyns, M.D., Ph.D.**, Professor and Chief of Cardiac Surgery, Gasthuisberg University Hospital (Katholieke Universiteit), Leuven, Belgium;
 - **André Simon, M.D.**, Managing Doctor, Thoracic Transplant Program, Hannover Medical School, Hannover, Germany;
 - **Stefan Klotz, M.D.**, Dept. of Thoracic and Cardiovascular Surgery, University Hospital Münster, Münster, Germany

Should you wish to meet with representatives from CircuLite at the meeting, please feel free to contact Gail Farnan, Vice President of Marketing at (551) 221-4993 or gfarnan@circulite.net

About Synergy™

A small implantable blood pump the size of a AA battery, the Synergy Pocket Circulatory Assist Device represents a new approach to mechanical circulatory support that is transforming chronic heart failure management by enabling earlier, less-invasive treatment for more patients. Synergy is the first partial circulatory assist device designed for minimally invasive implantation and long-term use. The system supplements the heart's natural function with just enough pumping capacity (up to 3L/min) to unload the heart and potentially enable positive remodeling. Nine patients have been treated in clinical trials thus far with Synergy and are doing well. Four patients in the short-term first-in-man trial successfully reached the endpoint of the trial, which was transplantation, and five patients in the long-term CE Mark trial remain on device support and are expected to continue on support for greater than 6 months.

About CircuLite®

CircuLite is developing a micro blood pump, designed to be placed superficially like a pacemaker, for the long-term treatment of chronic heart failure. The Synergy™ Pocket Circulatory Assist Device is designed to rest a failing heart by supplementing its natural function. By providing long-term circulatory assist on a minimally invasive platform, CircuLite's Synergy has the potential to transform the management of chronic heart failure and improve the quality of life for millions of patients and their families. For more information on CircuLite and the Synergy Pocket Circulatory Assist device, visit our website at www.CircuLite.net.

CAUTION: Investigational Device. Limited by Federal Law to Investigational Use Only.
